

## PRACTICAL QUESTION 1: Employee Attendance System (Authentication + OneToOne + CRUD)

### Scenario:

A company needs employee profile and attendance tracking system.

### Models:

#### EmployeeProfile Model:

- User (OneToOneField)
- Department
- Designation
- Salary
- Photo

#### Attendance Model:

- Employee (ForeignKey)
- Date
- Check In Time
- Check Out Time
- Status

### Tasks:

#### Authentication:

Employees login with username/password.

#### After Login:

Employee can see own profile.

#### Admin Can:

- Add attendance
- Update attendance
- Delete attendance

#### Dashboard:

Show total present and absent employees.

## PRACTICAL QUESTION 2: Library Management System (Relationship + CRUD)

## Scenario:

A library wants to manage books and book categories.

## Requirements:

### Create Category Model:

- Category Name
- Description

### Create Book Model:

- Book Title
- Author Name
- Price
- Publish Date
- Book Cover
- Category (ForeignKey)

## Tasks:

### Authentication:

Only librarian can login.

### CRUD:

Perform full CRUD for:

- Category
- Book

### Relationship:

One Category has many Books.

Show category name with every book in book list page.

### Extra:

Create a page to show all books under a selected category.
