

Specification Sheet for Web Application Development with Python

Level-4

Job 1: Develop a Quiz Portal

Create a quiz portal. Where the admin can arrange a quiz exam, can add questions and options for those questions. In a quiz, questions and options will be randomly ordered. An authenticated participant can participate in the quiz and can view his/her score as well as position.

Job Specification information:

1. Create a new Django project named Name_ID_Quiz and a Quiz app.
2. Define your models for the Quiz app.
 - a. Quiz (title, description)
 - b. Question (quiz: {many to one with Quiz model}, question)
 - c. Option (question: {many to one with Question model}, option, is_correct)
 - d. Participant (Name, Class, Age, Gender, Institution etc.)
3. Create views for Login (username/email and password) and Registration (username, email, password, confirm password) pages.
4. Create a Django form to manage participants' information.
5. Create a dashboard where the participant can participate in a Quiz.
6. Define URL Patterns and configure project-level URLs.
7. Implement the required Function and Logic in the view.py file.

Job Specification information:

1. Create a new Django project. (Naming Convention: Name_ID_Quiz)
2. Run migration to create data tables.
3. Create a super user. (username: admin, password: 1234)
4. Register your models to the Django admin.
